

8000-2-2 Dual Temperature Early Warning Panel

SHL 8000-1-2 live wire (195 – 450F) detection Series Fire Suppression Panel
 The 8000 series panels are design for single or multiple fire detection. The 8000-2 panel has two levels of detection.

1.0 First live wire sensor level is set at a low temperature 195F (per customer specifications) activates yellow LED and intermittent audible.

2.0 Second live wire sensor is set at 350F (per customer specifications) when activated turns on the Red LED and actuates the 90pd plus continuous audible

The 8000 series panels can be used as stand alone warning systems or combined with all of the USA PRO Safecraft suppression systems.
